

Date: Oct. 31, 2025

Attendees: everyone, except Geon (Rowing competition)

## **Discussions**

- Ticket updates (Progress update, blockers, help needed, etc)
- Discuss UI Design for different pages based on Figma designs team members have created
- UI Design should be done for small (mobile phone) screens first

## **UI Discussion on Figma designs**

### *Collection UI (Elite):*

- make sure to add a group by option to the filter options
- Add business requirement description in the ticket about master vs grandmaster set
- Decide user flow & filter categories for the collection view
- Back button is a state button and not for filters, this would need an 'x' button
- Images take a long time to download so we can store them in the app but this would make the app a larger download size. Keep higher res images in database?
- If a user has only one card of a certain card(????) then it should go straight to the card. If the user has multiple cards of that card, it should take to a screen where they can pick which specific card they want to step into
- Add group by in filter page for user defined tags

### *Card Scanning UI (Tania):*

- Suggestion on adding a bounding box on the camera screen when it is open.
  - Bounding box should be 800 x 600 px for pokemon card, but should be extensible to different shapes & resolution for other collectibles
- Confirm scanning page:
  - Change dropdowns to selectable buttons/pills where applicable to reduce number of clicks
  - Tags are displayed with top 3 most common to the user + the ability to create a new tag
- Add a page for viewing a single card:
  - Similar (almost identical to card scanning page), but instead of confirm card scanning, we have save/cancel button
  - Fields should be editable by default
- If a user presses highlight and they already have 3 cards highlighted, ask them if they want to swap one of their highlighted cards to the card they're on

### *User Profile UI (Ishpreet):*

- A set of preset/predefined images for the profile image and banner.
- Banner image is the same preset for each collection types
- Only allow user to upload their own images for profile & banner if they get the membership (paid feature)

- Location search: Ideally use an API to get the list of locations to enable autocomplete search instead of a text field (If too difficult, can defer for after POC)

#### NON UI NOTES

- Everyone can download the dataset now!
- Database is underway!
- Testing library has been merged into repo
- Unit tests setup & overview for the team
- Using ESLINT to make code uniform :)
