

Date: Oct. 17, 2025

Attendees: everyone

### **Discuss Project Initial Setup**

- Next.js + Capacitor for web and mobile development.
- Go over steps in README:
  - How to run dev emulation for web.
  - How to run dev emulation for iOS (XCode) and Android (Android Studio).
- JIRA:
  - Base tasks.
    - Start development on AI-side (Jupyter notebooks). New folder in repo.
    - Find a UI library to start working on the design of the app. Should support mobile gestures.
    - Find a database with support for Prisma ORM.
      - The budget is very small (act like we have no budget and look for free options first).
    - User authentication setup.
      - Break into smaller tickets.
  - Paper prototypes first, then Figma before starting front-end UI development.
  - Assigning tickets.
